

Severe Weather Doorglass

Western Reflections severe weather glass is designed for hurricane-rated doors, especially for homes in hurricane or high wind zones. Our laminated severe weather door lites are certified to meet Texas and Florida building codes and wind-borne requirements, and DP±66 wind and missile impact code requirements.

Choose from decorative, clear, and blinds-between-glass options to suit your style and functional needs. Each is designed to provide protection from damaging wind and water infiltration and eliminate the need for hurricane shutters.

Severe weather glass (or 'hurricane glass') also reduces sound infiltration. Sound Transmission Class (STC) testing shows that laminated glass provides up to 30% more [suppression of outside noise](#) than standard doorglass, when used in a properly fitted and installed door system.
